***(1) Hosting Package must have email facility.**

Due to the functionality required for sending emails from a website the hosting package must be set up with certain extras (ActiveX components) which the website can interact with to format data into emails.

***(2) Web space must have database set up.**

For contact form details to be added to a database the web-space must already have a database set-up in place. The extra functionality of database entry from a contact form includes set up of a table in an already existing database and programming to add data to the table on submission of the form.

The cost for email entry into a database does not include the set up of a database on the clients web-space.

***(3) Website must have the following set-up.**

Due to the functionality required for uploading files to a website the hosting package must be set up with certain extras (ActiveX components) which the server uses for uploading files.
